SLOECC ARES®/RACES Training Plan

Training Module: Section 5.4.7. Use packet radio and Winlink to send digital messages.

Registered trademark of ARRL

Training Plan: Skills-based Task

- 5.4.7. Use packet radio and Winlink to send digital messages.
 - Demonstrate programming of digital frequencies into radio
 - Demonstrate the log on, boot up and opening of Paclink and Thunderbird
 - Demonstrate the log on, boot up and opening of RMS Express
 - Demonstrate connection to digipeater, peer-to-peer, and simple terminal packet
 - Successfully send and receive packet messages

What is Packet Radio & Importance in Emergencies

- **Packet radio** is a form of packet switching technology used to transmit digital data via radio or wireless communications links.
- It uses the same concepts of data transmission that are fundamental to communications via the internet.
- Packet radio is used in emergencies to:
 - pass a message accurately (especially long messages such as lists)
 - pass a message to multiple recipients simultaneously
 - offers more privacy than voice communications
 - provides automatic record of message
 - allows a message to be printed

What is required to set up a Winlink Packet Station

- Windows Computer (sorry Mac users!) and printer
- Winlink Software (Packlink-Thunderbird or Winlink Express aka RMS Express)
- Terminal Node Controller (TNC) with serial/USB cable to computer
- Cable to Radio with digital in/output port (programming port)
- VHF radio, power supply, cable, antenna

Winlink System for E-Mail (overview)

SLO County Digipeaters and Winlink

• TASS 145.070, SIMEON 145.010, NIPOMO 145.050, BLACK 145.090

Winlink Addresses for SLO County

EOC	SLOEOC-1 or SLOEOC-1@winkink.org
ECC-5	SLOECC-5 or SLOECC-5@winlink.org
ECC-8	SLOECC-8 or SLOECC-8@winlink.org
ECC-11	SLOECC-11 or SLOECC-11@winlink.org
ECC-12	SLOECC-12 or SLOECC-12@winlink.org
ECC-14 (Portable Packet)	SLOECC-14 or SLOECC-14@winlink.org

Packlink Used at EOC & ECCs Winlink Express Recommended Everywhere Else

- Packlink still available on Winlink.org web site
- However, Packlink has not been upgraded since 2009
- Does not have .ini files for all TNCs especially new ones
- Does not support KISS mode TNCs
- Winlink Express recommended for individuals and new installations

Packlink/Thunderbird Step by Step

- 1. Turn on computer and log on
- 2. Turn on radio and TNC set appropriate digipeater frequency/channel on radio
- 3. Open Packlink, Open Thunderbird
- 4. When Packlink finishes its initialization it says READY
- 5. Click CONNECT, On drop down menu click AUTOCONNECT
- 6. Look for connection to digipeater
- 7. Look for connection to AE6EQ-7
- 8. Look for connection to CMS server
- 9. On Thunderbird click GET MESSAGES any mail will be delivered to inbox
- 10. On Thunderbird click WRITE write your e-mail.
- 11. Subject Line must start with //WL2K P/ (subject line)
- 12. On Thunderbird click SEND
- 13. During emergency, Reset Packlink Polling Interval to 5-10 min in FILES

Winlink Message Precedence Categories

- Precedence categories are Flash (Z), Immediate (O), Priority (P), and Routine (R).
- The precedence indicator is included in a Winlink message by adding one of the following to the beginning of the subject line in a message whether originated from Internet email or within the Winlink system.
- //WL2K Z/ Flash (for urgent message use only)
- //WL2K O/ Immediate (for urgent message use only)
- //WL2K P/ Priority
- //WL2K R/ Routine (Default) or just //WL2K/
- On the receiving end, recipients reacting to messages with Reply, Reply to All and Forward will create messages that are treated with the same priority as the original unless the precedence indicated in the subject line is edited when replying or forwarding.

Why Winlink Express is Recommended

- Secure login now required (security feature)
- Winlink Express Registration:
 - Optional but \$24 Registration donation helps offset real operating costs. Prior WINMOR (HF) registration is OK.
- Email program is integral (modeled after Outlook)
- Updated Frequently (several times per month)
- Has both VHF Packet and HF Packet modes (Pactor/WINMOR)
- Allows Peer-to-Peer messaging (P2P)
- Has Forms and Templates for message use
- All TNCs including KISS mode supported
- Radio support for most HF rigs via USB

Winlink Express Step by Step

- Launch Winlink Express
- Select Packet Winlink
- Select Messages, New Message
- Write new message Subject line starts //WL2K P/ otherwise is added automatically without the "P" = priority
- Post message to OUTBOX
- Select OPEN SESSION (Causes initialization of TNC)
- When "Ready" appears, Select START
- Outgoing messages sent, incoming messages received and placed in INBOX
- Click on Message to read, reply, or print
- Close each window to exit

I have enjoyed the privilege of working with n6kzb in developing the HTML forms adopted by the <u>Oregon Office of Emergency Management for all</u> <u>County EOC to State level communications</u> when phone and internet are down. We had some specific and somewhat unusual requirements so that the new forms would generate a plain text version that exactly duplicated the templates used previously. The new designs have been enthusiastically received, and will be the centerpiece of a large State-wide Simulated Emergency Test soon.

Winlink P2P

- P2P allows one station to directly send message to another station
- Internet and RMS server station not needed for P2P
- Both stations must be running Winlink Express and be in P2P mode
- Direct connect on a simplex frequency or through Digipeater
- Must select P2P in new message window when writing message
- Address of message is call sign of that station
- NO //WL2K P/ in subject line
- Voice communication first on frequency is help in coordinating exchange

• Simple Terminal:

- Simple Terminal is found in Help menu
- Simple Terminal (regular packet) allows group conversations
- Simple Terminal does not support KISS mode (in Packlink or Express)

Dick, AF6MP 3-22-2017

So what goes wrong with Winlink?

- Log on to computer fails! (check caps lock, capitalization, spaces)
- TNC does not respond, or initialize! (turn off TNC to reboot, check serial/USB connection, reboot computer if necessary for proper port)
- Radio not on correct channel! (Motorola Channel 07 = 145.070 TASS)
- Failure to put "//WL2K P/ in subject line "default" can take up to a day to be received depending on traffic.
- Can't connect with Digipeater! (move location, check antenna, power output)
- Winlink RMS server/computer (AE6EQ-7) fails to connect or immediately disconnects! (Problem at EOC)
- P2P not selected in New Message for P2P exchange
